# Inventory Management System

In today's challenging business climate, organizations need to be more efficient than ever before. Lower inventory levels and less staff have meant that whether business is up or down, the pace of productivity has never been higher. Managing inventory is critical to maintaining the business and TAB can help. TAB FusionRMS for Inventory Management is an integrated physical item inventory management system designed to help even the busiest environments effectively and easily manage their inventory, assets and value.

---

## Here's how:

- Improves efficiency by streamlining your inventory management process
- Load List / Pull List management for electronic shelving
- Generates reports for recipient history, audit and asset value
- Calculates minimum, maximum and low usage inventory levels
- Captures usage and transactional history
- Monitors item expiration and shelf life dates.
- Calculates storage space remaining and maximum capacity based on quantity level and multiple locations
- Web based order entry functionality

## Quickly Locate Your Items

TAB FusionRMS Inventory Management System monitors items and supplies using the same bar code identifier from procurement through distribution processes. It captures all of the transactional data for reporting and on-demand audit compliance. Minimum supply level thresholds can be set with alerts to minimize out of stock conditions that impact business and reduce RUSH exception handling which lowers operating costs and ensure mission critical items are always available.

Intuitive database browser tools and easy to use Windows based user interface ensures users are productive and significantly reduces initial learning curves.

## Technologies

- Physical Tracking
- Workflow
- Retention
- Reporting

## Features

**Manage item inventory** count and history as items are added and removed.

**Capture user defined comments** for specific items as they are added or removed.

**Inventory reports** (Packing Slip) per recipient with optional recipient data.

**Manage** the minimum and maximum inventory levels.

**Automatic location creation** based on number of shelving units, shelves per unit, and positions per shelf for electronic shelving units.

**Manage locations of inventory** items automatically

**Allowing re-allocation of locations** when the inventory quantity drops to zero.

**Reporting the inventory value** by location and a sum of the total value.

**Manage the load list** and pull list submission to an electronic shelving unit.

**Order entry capability** for recipients to place orders for inventory items.

**Order fulfillment** and back-order inventory management.

**Low usage report** for items not removed from inventory within an operator specified number of days.

**Shelf life management** for items with expiration dates.
